SHOWN WITH OPTIONAL OVERMANTEL  
(AVAILABLE WITH ALL NOBLE COLLECTION MANTELS)

Our Thin Cast Stone Mantels use a stone composite to replicate the warm color and texture of natural stone and are treated with a clear finish sealer and do not require further finishing. These mantels are lighter than traditional cast stone and are reinforced for strength and durability. Each is very easy to install, requiring only simple tools and limited skill. Each mantel surround is non-combustible in accordance with ASTM-136, thus no space is required between the mantel and the firebox. Thin Cast Stone Mantels are available alone or as a full kit which includes three matching facing panels and a hearth. The facing panels are adjustable and allow for many different firebox opening sizes. An additional Riser piece is available by request. Optional overmantel available for mantels in Noble Collection.

Non-Combustible Material

Height Adjustable on Site

Matching Facing Material  
Available
